

## WSTIMS For Windows

### Fix List

Status	Priority	Program Version	Component	Issue	Notes
Closed	H	1.0.1.63	Official Work Assignment	If all values for an event group are eliminated the official assignments can be lost and not exported	Added functionality to the Running Order window to warn when the last skier for an event group is being removed. The warning only occurs if there are existing official assignments for the event group about to be eliminated. An option will be offered to change the event group for the assigned officials.
Closed	M	1.0.1.63	Import	For collegiates allow "OF" in the event group even if division is a collegiate division	Done
Closed	M	1.0.1.63	Import	Skiers are marked as "Not Ready"	Non-skiing officials with an age division and nothing in the membership column were being marked as "Not Ready" but these should be default to ready.
Closed	M	1.0.1.63	Slalom Entry	If a pass is added to a skier then subsequently deleted the 2 slowest speeds that were hidden are now visible.	Fixed issues that were allowing speeds below a divisions minimum to be shown.
Closed	H	1.0.1.63	Skier Performance File	The program was encountering an exception and terminated processing while attempting to generate the skier performance file from the tournament package window.	There was an issue that the processing was overloading the database when more than 200 skiers were being processed. The processing was enhanced to more efficiently access the required database so the database would not become overloaded regardless of the number of skiers that need to be processed.
Closed	L	1.0.1.63	Scorebook Html	If teams are available include the results in the HTML file	Done for AWSA and IWWF versions.
