

## WSTIMS For Windows

### Fix List

Status	Priority	Program Version	Component	Issue	Notes
Closed	H	1.0.1.66	Team Management	Validation errors are being thrown on spacing rows	Enhanced validation to skip spacing rows and only validate on rows with actual data.
Closed	M	1.0.1.66	Running Order by Round	Unable to print judge forms from running orders by round	Added functionality to allow printing for judges forms from the running order by rounds. Added the ability to filter this list by age divisions also so the run order for a particular division can be selected and printed.
Closed	L	1.0.1.66	Database Upgrade	Error messages being encountered during the upgrade processing. Bypassing the messages does not seem to create a problem but users are unclear of the meaning	I have eliminated most of the error messages but there are still some that occur that it is not possible to eliminate. Any error that contains "table not found" can be ignored.
Closed	H	1.0.1.66	Running Order	New division filter is not working	Found and correct error in the filter selection.
